Subject-level paired t-test — AttUNet ckpt-48 vs ckpt-70

Raw (non-denoised) test sets. Dice averaged within subject first, so each subject contributes one paired observation.

Test set	Subjects (n)	ckpt-48 mean ± SD	ckpt-70 mean ± SD	Δ mean (48 − 70)	95% CI of Δ	t (df)	p (paired t)	Cohen's d_z	p (Wilcoxon)
High-field	6	0.916 ± 0.029	0.917 ± 0.033	**-0.0004**	[-0.0085, +0.0077]	-0.119 (5)	0.910 n.s.	**-0.05**	0.688 n.s.
Low-field	7	0.673 ± 0.157	0.656 ± 0.143	**+0.0167**	[-0.0091, +0.0426]	1.582 (6)	0.165 n.s.	**+0.60**	0.297 n.s.

Δ > 0 favours ckpt-48 (blue), Δ < 0 favours ckpt-70 (orange). Significance: *** p<0.001, ** p<0.01, * p<0.05, n.s. p≥0.05. With n = 6–7 subjects the Wilcoxon signed-rank p cannot go below 0.031 (n=6) / 0.016 (n=7), and the t-test detects only large effects.
