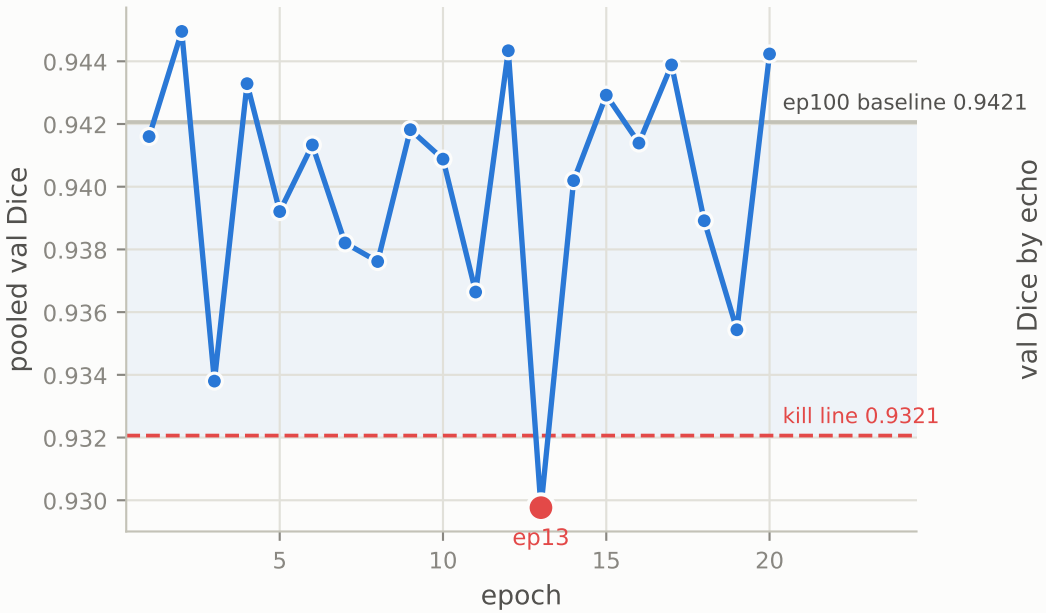
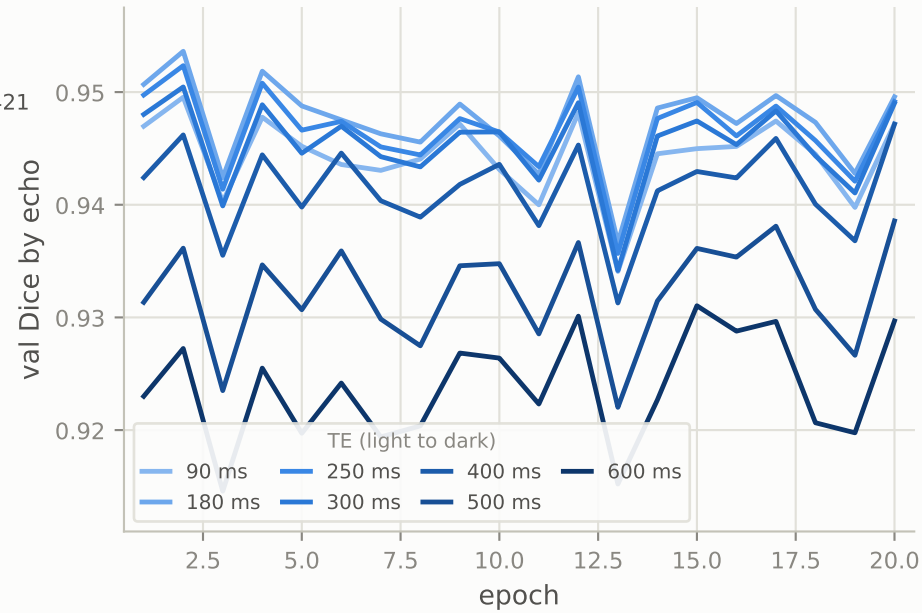
lambda = 0 hole instrumentation: 20 epochs from v3 epoch 100

264,385 selected pixels over 20 epochs. The loss was never touched (lambda = 0) - this run only measures the selector.

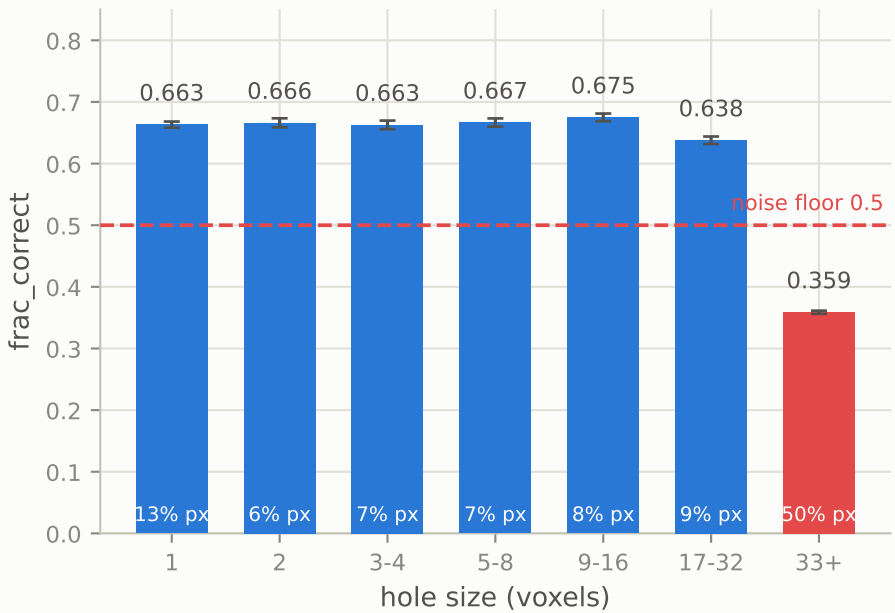
Validation held steady; one excursion, recovered

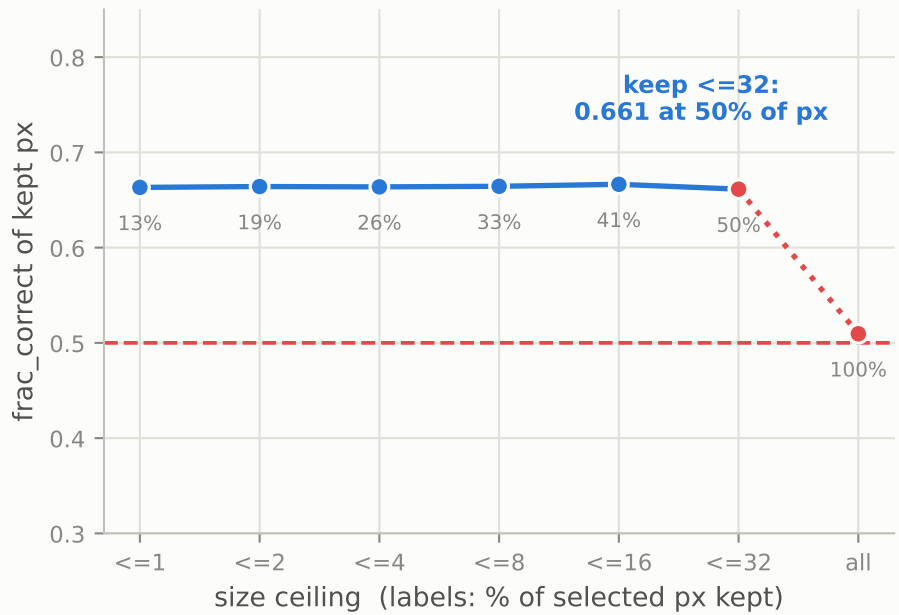


Long-TE gap closed: spread 0.0277 -> 0.0199 (p = 0.0021)



Flat at ~0.66 to 32 vox, then collapses





The cap is the only decision that matters
